## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/28/2007 has been entered.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1, 11-13 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Trull (US 5,947,929).

Claims 1 and 13: Trull discloses in Figures 2 and 4 an injector comprising a housing (60) and a drive member (40) comprising a retaining member and outwardly extending flange member; a syringe (10) comprising a body and a plunger (24) comprising a wall/base member (80) having an inner surface defining a retaining shoulder (86) and inwardly projecting flanges/connection members (30) which are fixedly disposed on the inner surface of the wall; wherein at least one retaining member on the drive member is adapted to engage with the retaining shoulder to enable the drive member to retract the plunger; and wherein the inwardly projecting flanges are adapted to engage the engaging flange members

on the drive when the syringe is rotated about its longitudinal axis operable to cause the retaining member to disengage the retaining shoulder (column 6, lines 46-56).

Claims 12 and 16: Trull discloses in Figure 4 the plurality of flanges spaced evenly, radially, and longitudinally along the wall

Claim 11: Trull discloses in Figure 11 the interior surface of the wall defining a retaining shoulder formed on an axial plane and the plurality of inwardly projecting flanges radially spaced along the interior surface of the wall and extending in a longitudinal direction proximal to the retaining shoulder.

*Response to Arguments*

2. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

3. Applicant's arguments, see response, filed 2/28/2007, with respect to the abstract have been fully considered and are persuasive. The objection of the abstract has been withdrawn.
